# Problem Statement

- XYZ is a private equity firm in the US. Due to a remarkable growth in the cab Industry in the last few years and multiple key players in the market, the firm is considering an investment in the cab industry.
- Objective : Provide actionable insights to help XYZ firm in identifying the right company for making investment.

The analysis has been divided into four parts:

- Data Understanding
- Determining the company with more clients
- Determining the most affordable company for clients
- Determining the most profitable company
- Testing various hypothesis

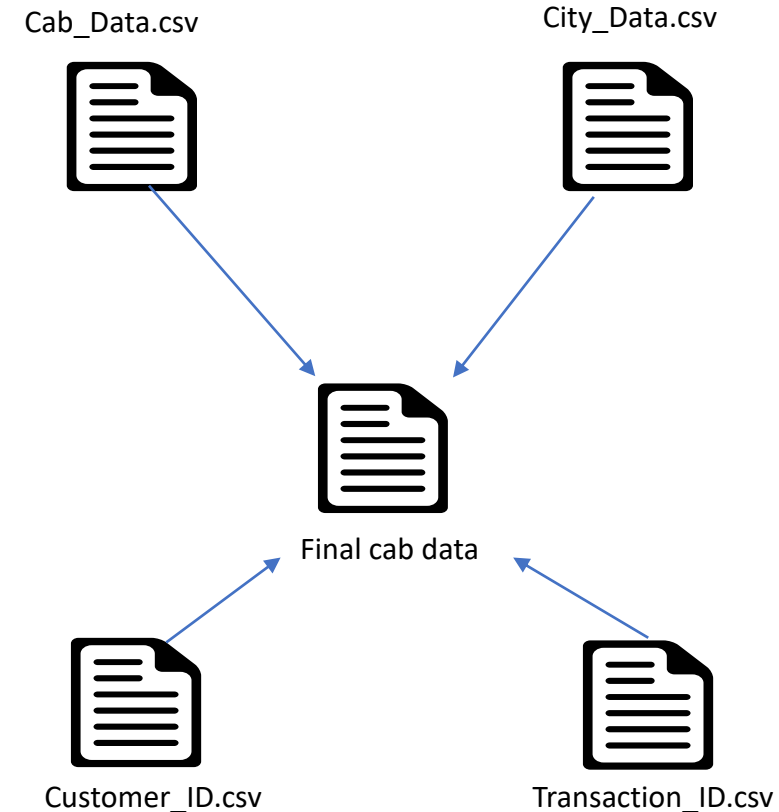

# Data Information

## Data Information:

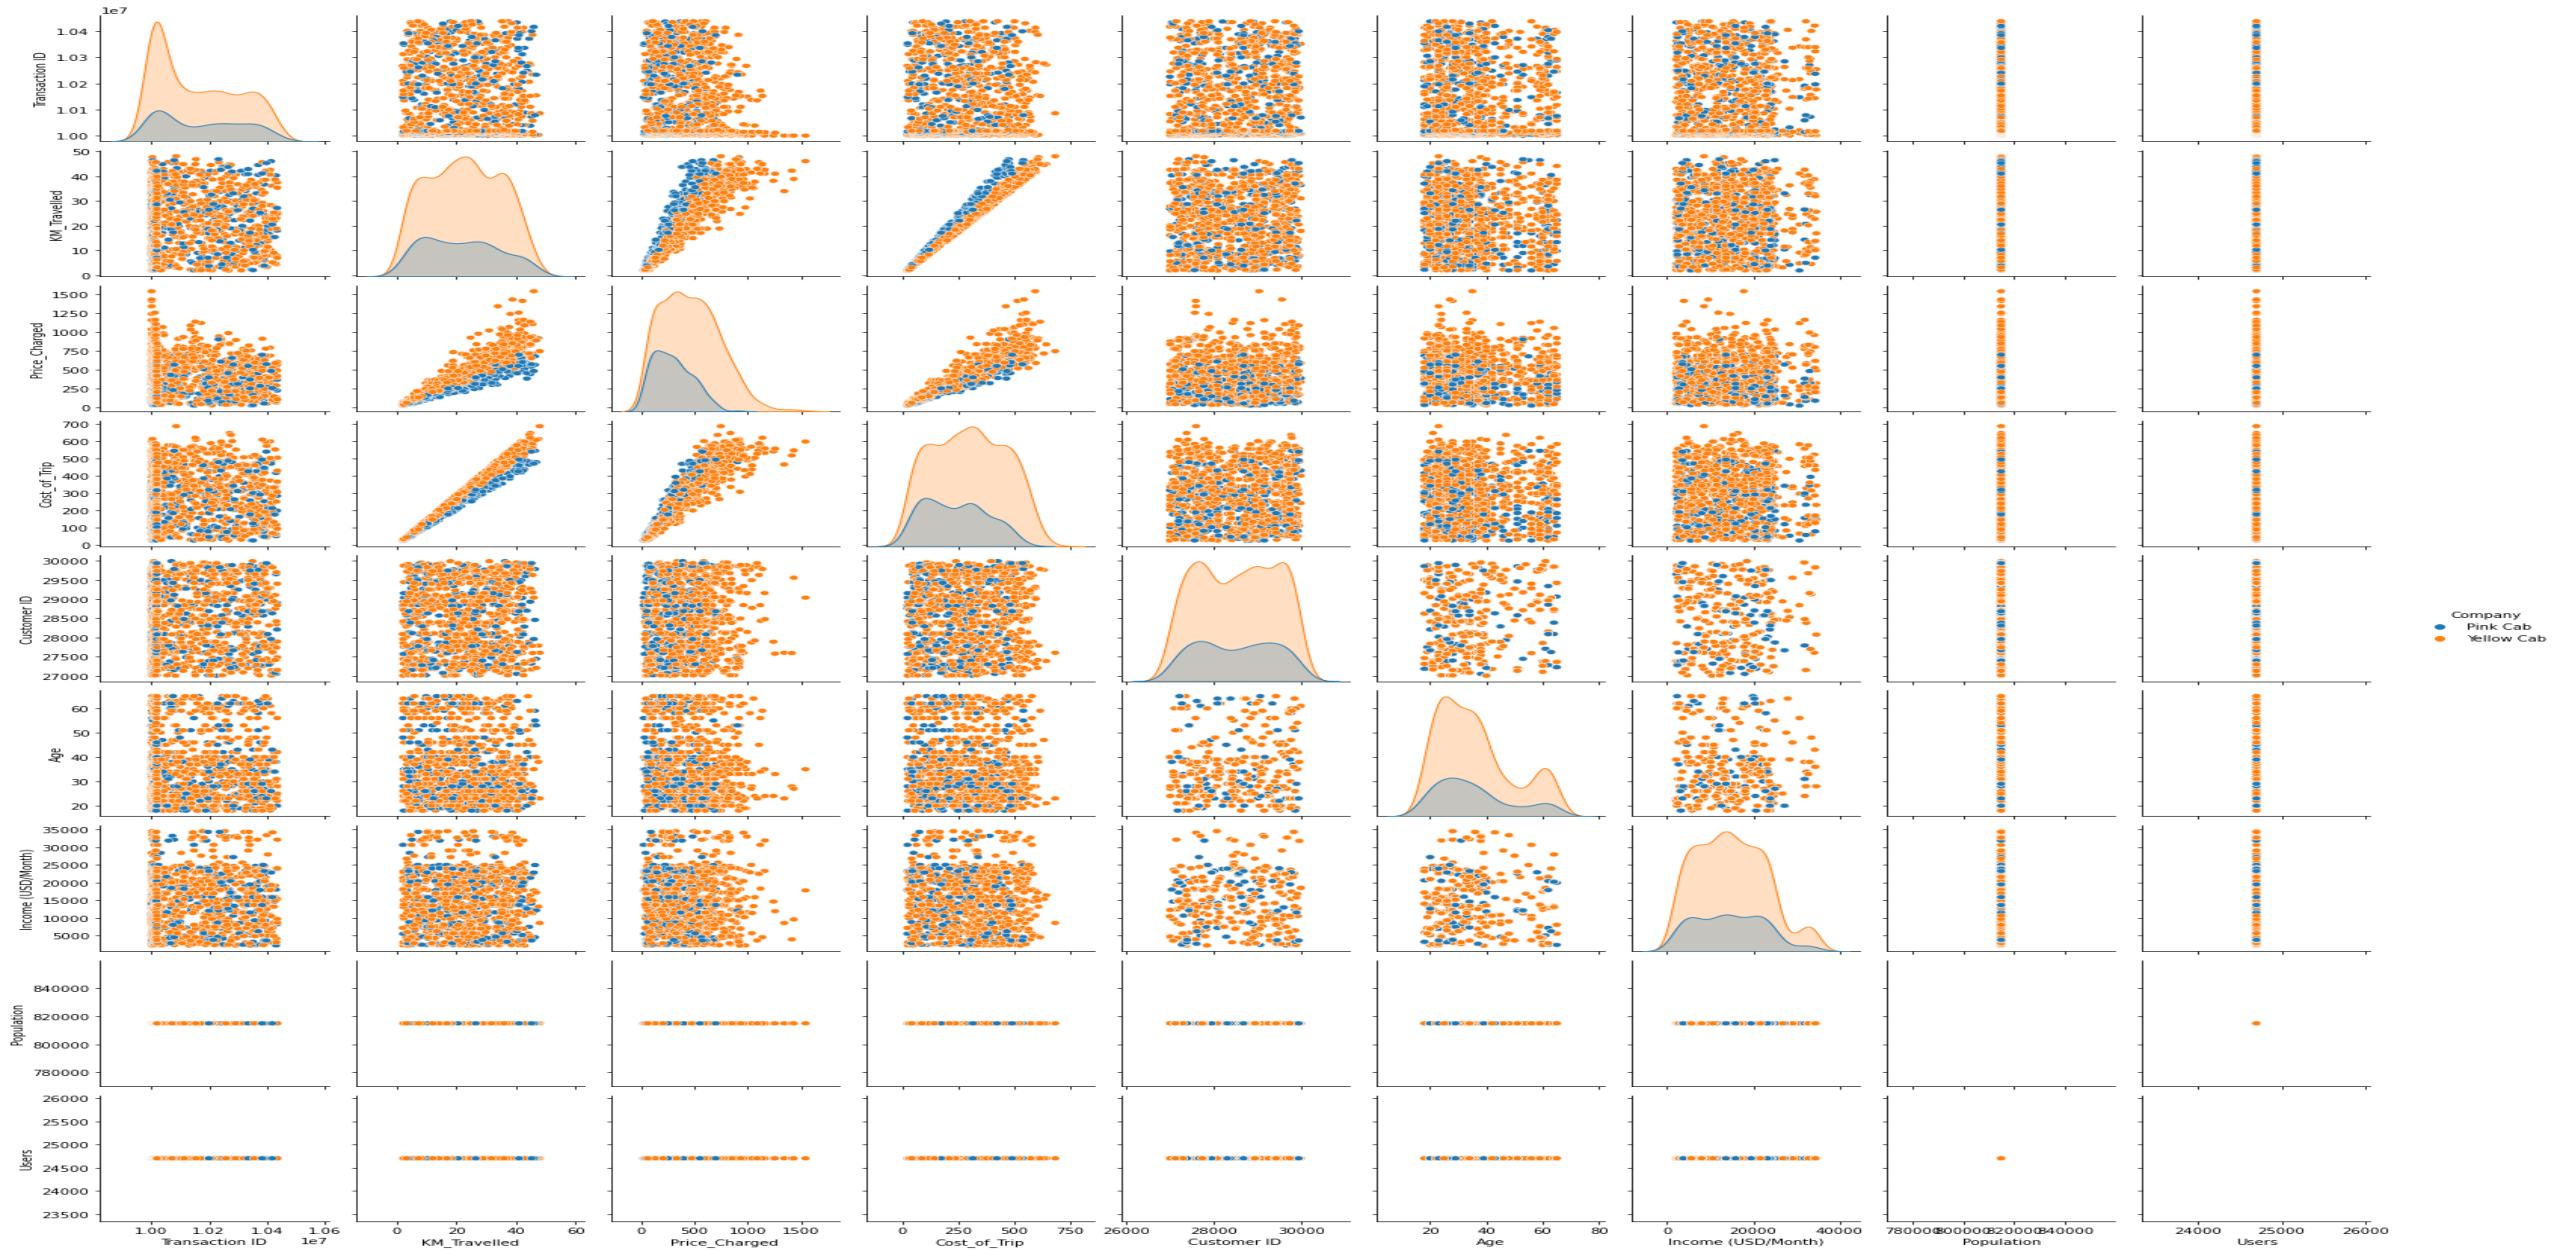

- Cab\_Data.csv: This file includes information about transactions for two cab companies.
- City\_Data.csv: This file contains information about some American cities' population and cab users.
- Customer\_ID.csv: This file contains customers' demographic information.
- Transaction\_ID.csv: This file contains information about transactions and payment methods.

## Assumptions:

- There are outliers in the Price\_Charged feature. However, because no information about trip duration is given, the outliers have not been treated as such.
- Profit of rides are calculated assuming that other factors are constant and only Price\_Charged and Cost\_of\_Trip features are taken into consideration.

# Relationships Between Features

# Correlation Analysis

## Insights:

- Population and Users are highly correlated
- Price\_Charged, KM\_Travelled, and Price\_Charged are highly correlated
- Customer\_ID is negatively correlated with both Population and Users

Correlation Heatmap of "G2M Insight for Cab Investment", fontsize = 20

# EDA

## MARKET SHARE

### Insights:

- Yellow Cab has more clients than Pink Cab

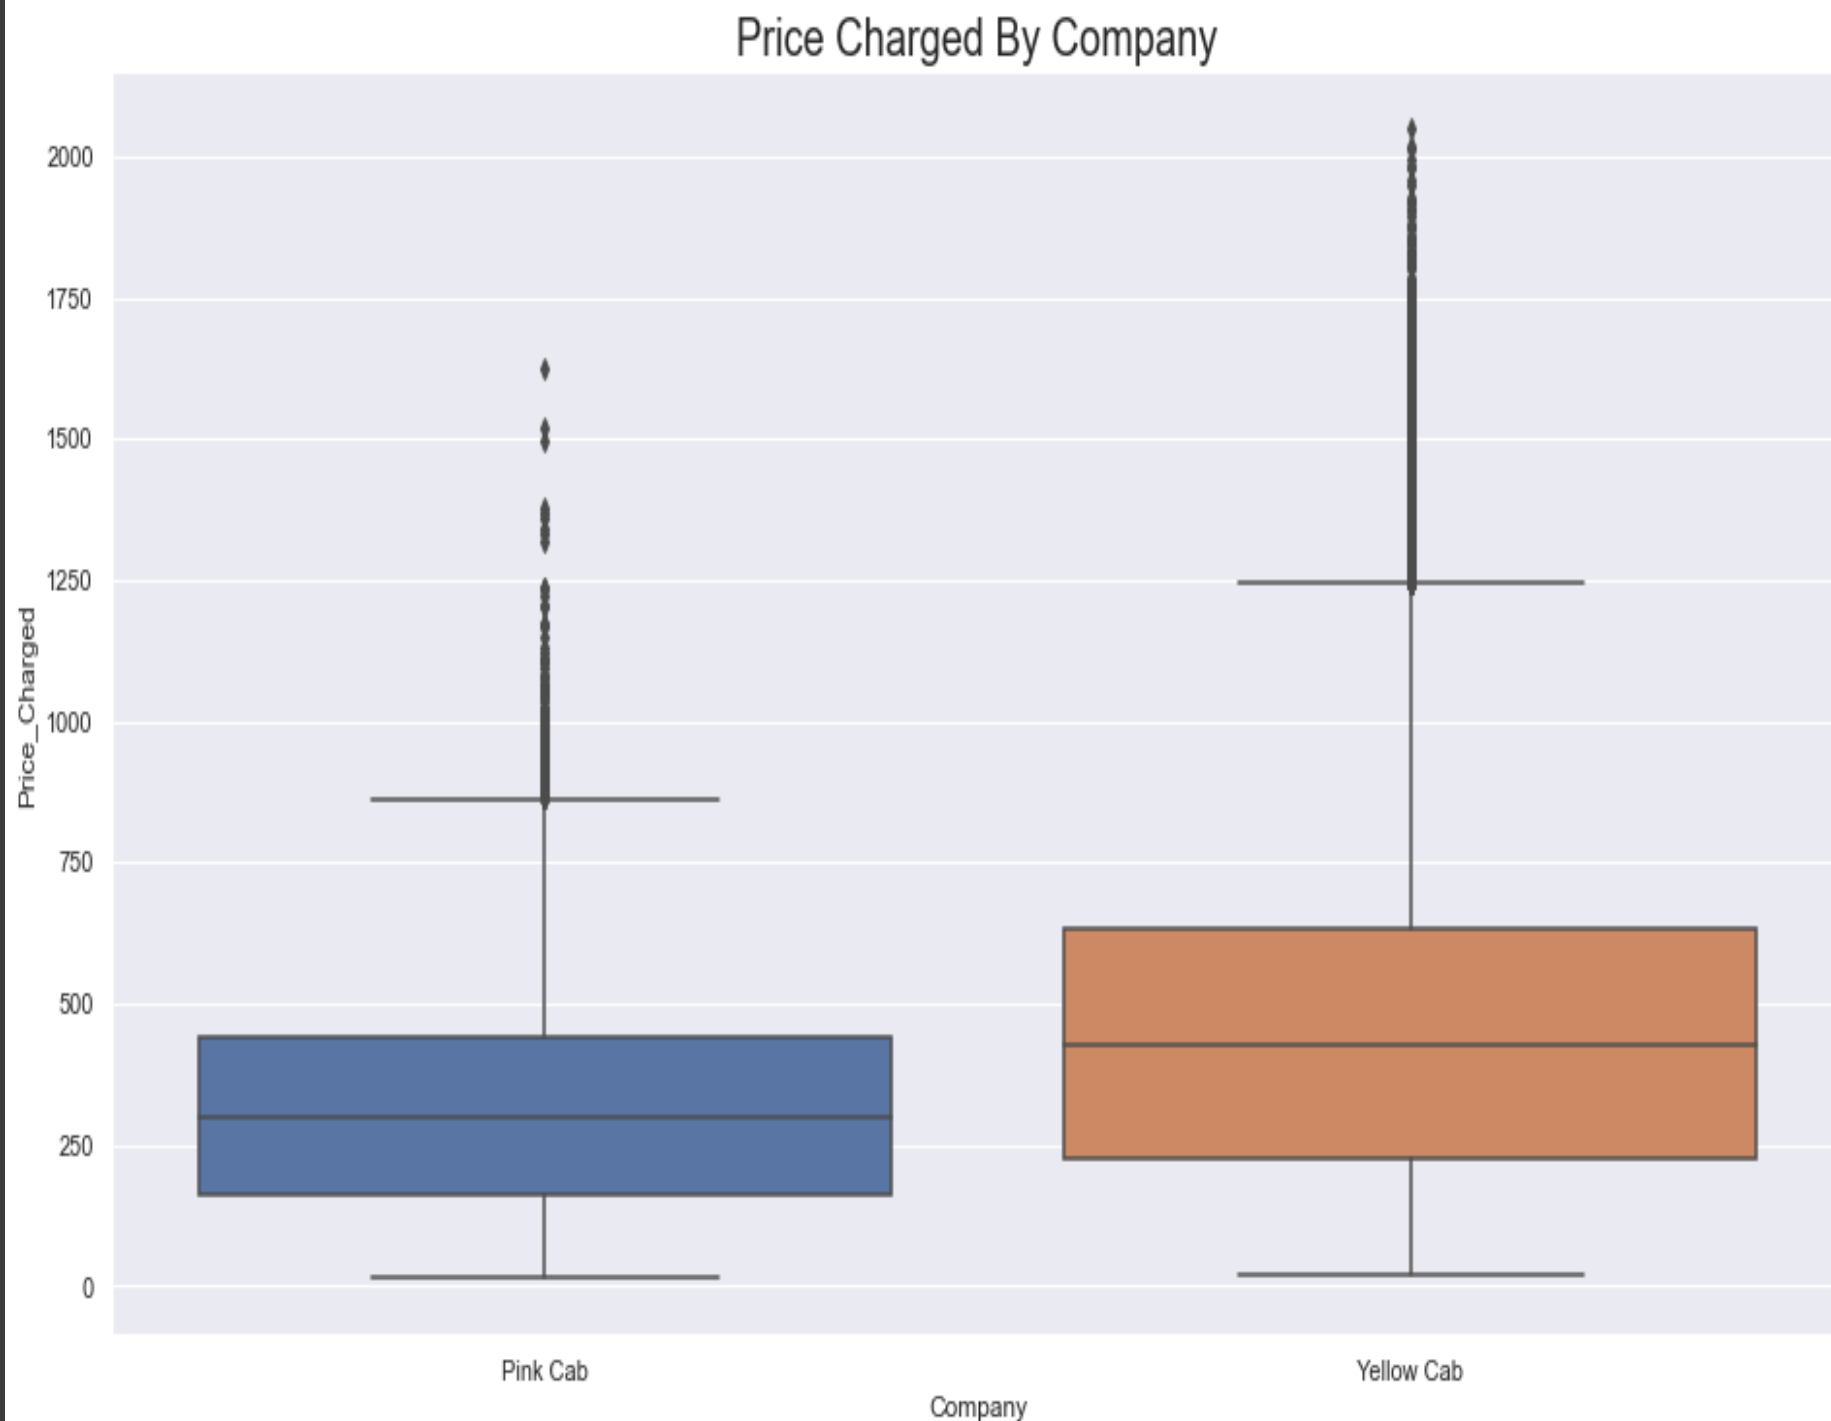

# EDA

## Cab Service Prices

### Insights:

- Yellow Cab is more expensive than Pink Cab

# EDA

## How do Customers Pay For Rides?

### Insights:

- Most customer pay by card

# EDA

## Customer Distribution by Gender

### Insights:

- There are more males than females using cab services

Share of customers by gender and cab

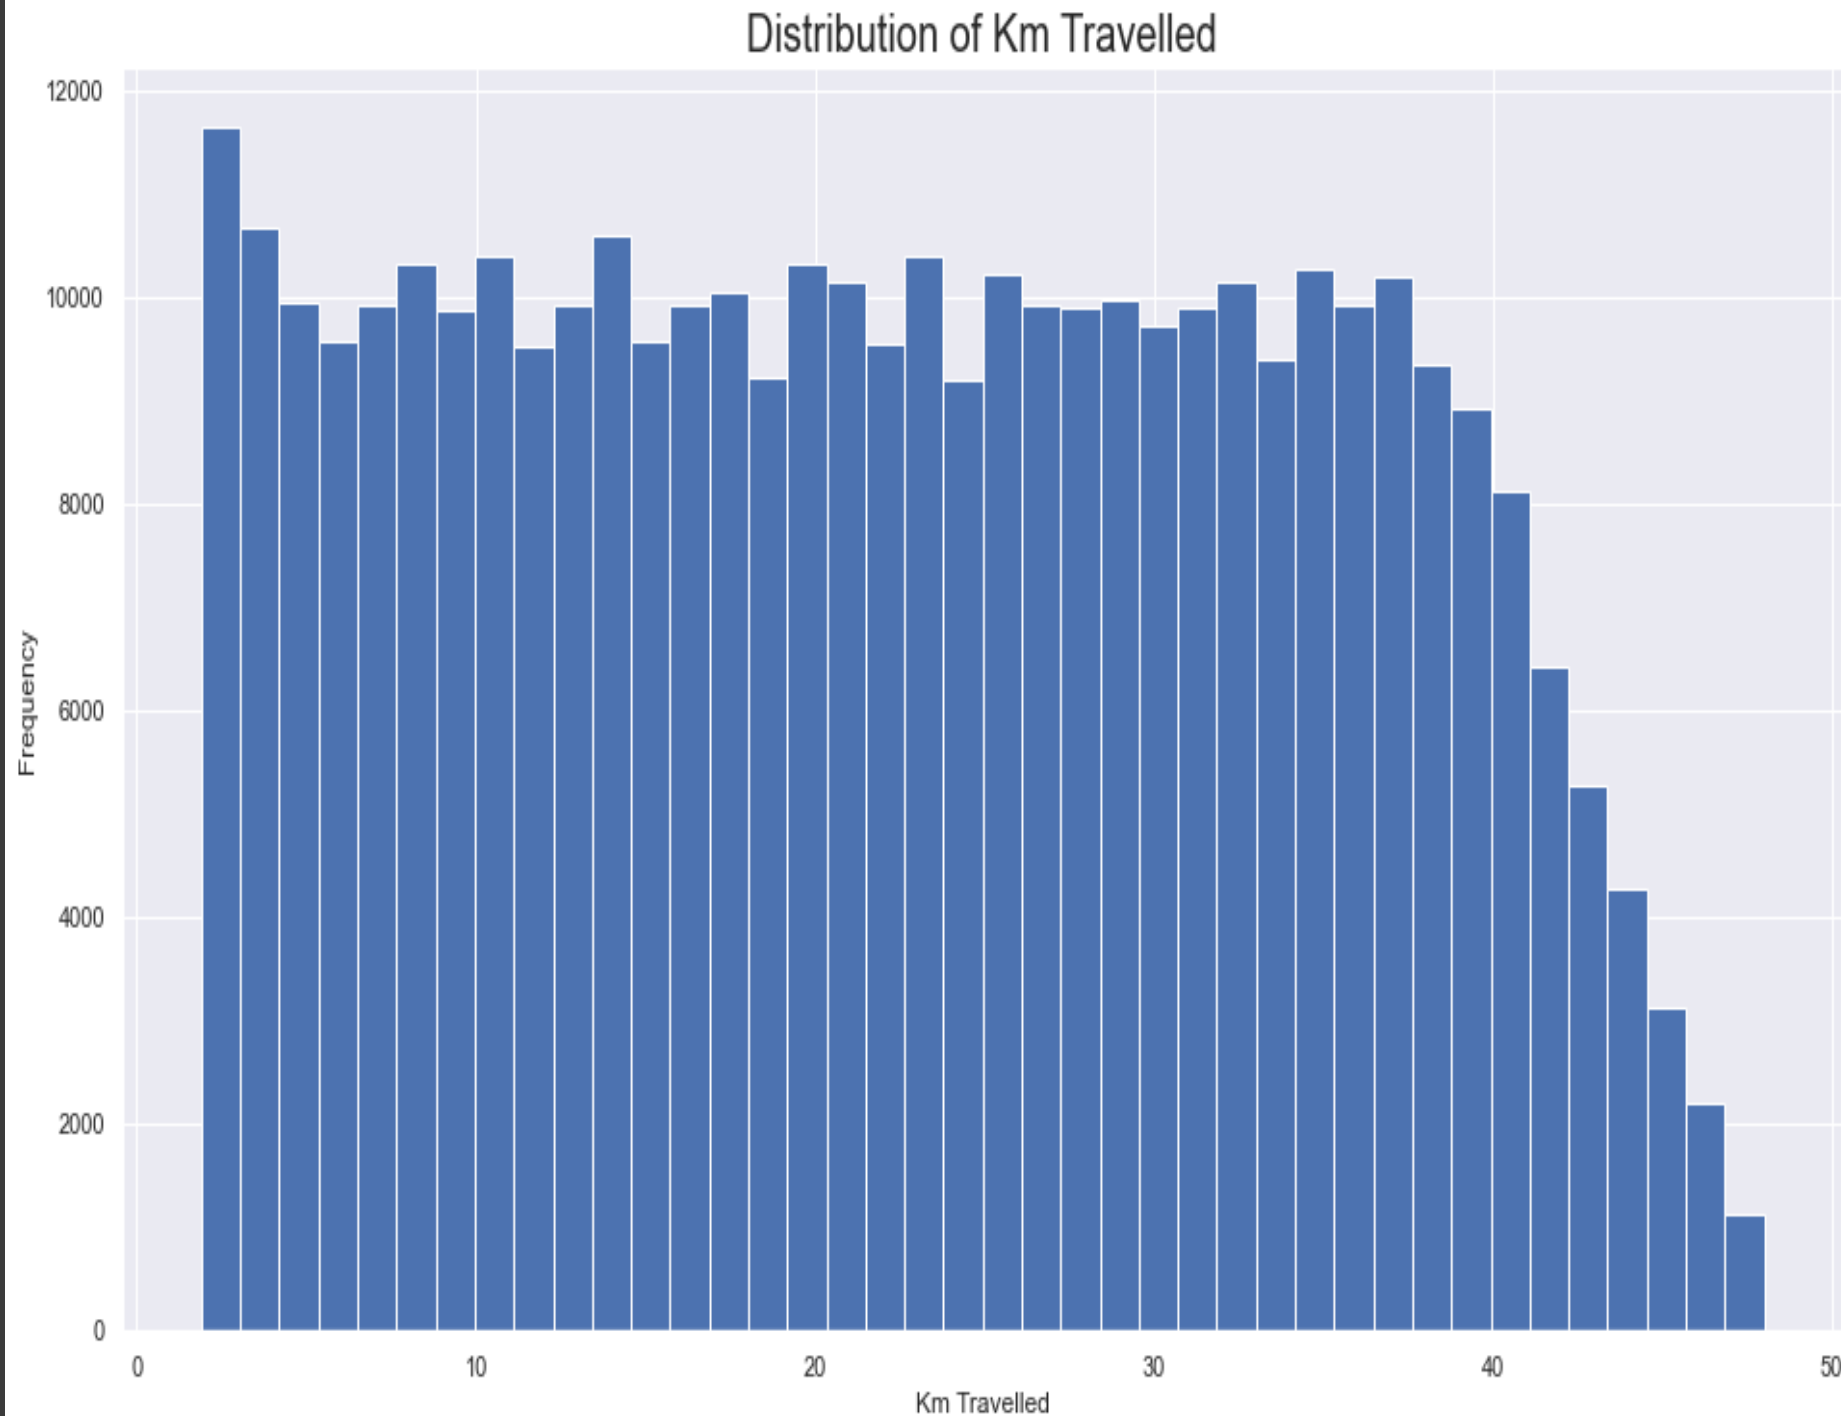

# EDA

## Distribution of KM Travelled

### Insights:

- Trips vary between 2 and 48 KM
- Most common trips are less than 40 KM

# EDA

## Clients Per City Population

### Insights:

- San Francisco, Boston, and Washington have the highest percentage of cab users per city population.
- Each of these three cities has more than one-third of their respective populations.

# EDA

## Clients Average Age

### Insights:

- Both male and females clients have an average age of approximately 34.

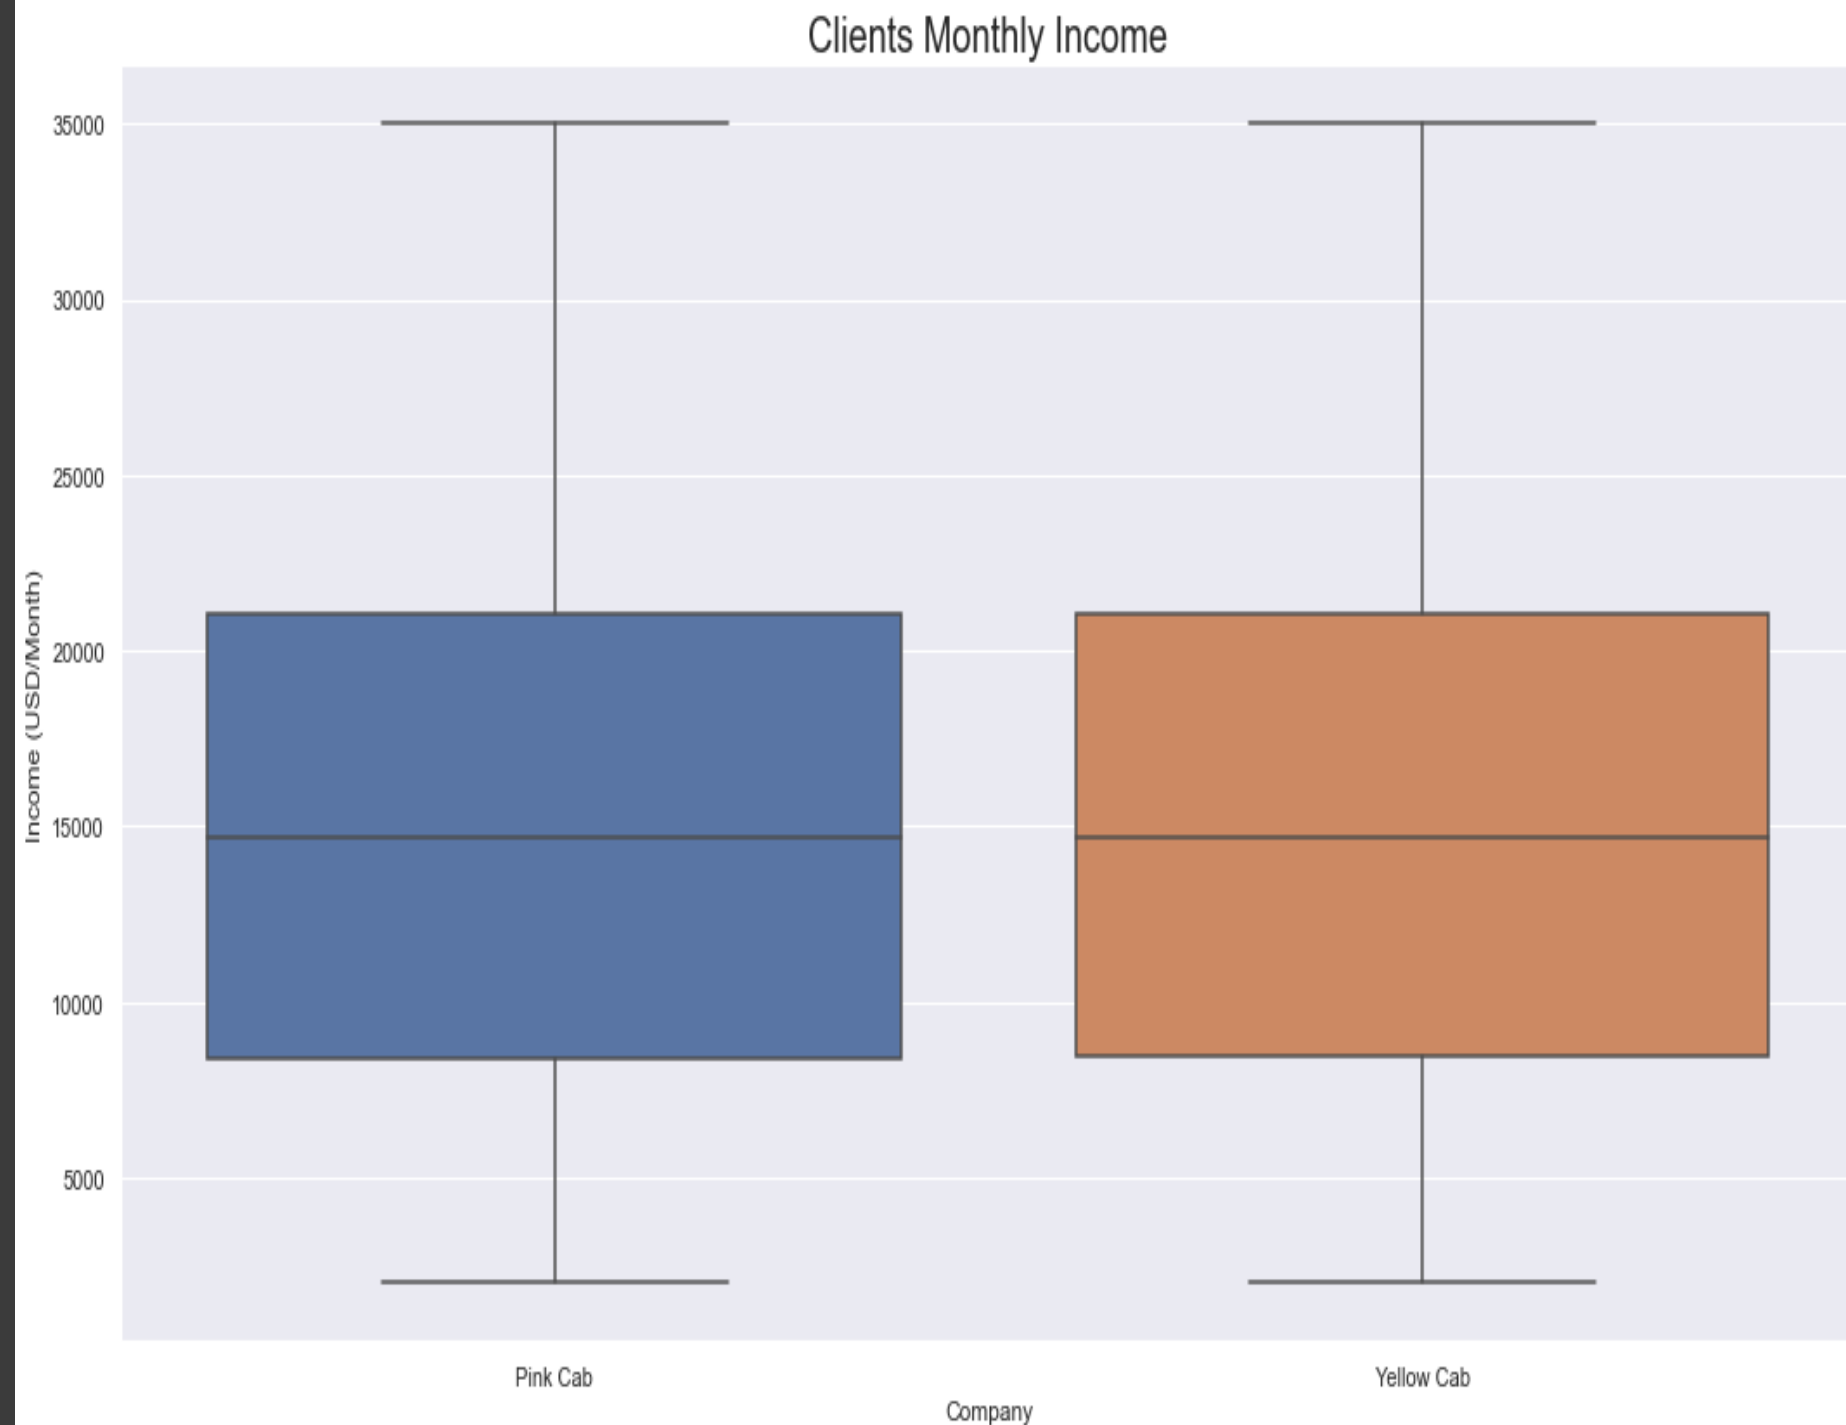

# EDA

## Clients Average Age

### Insights:

- Clients average monthly income is approximately \$15000.

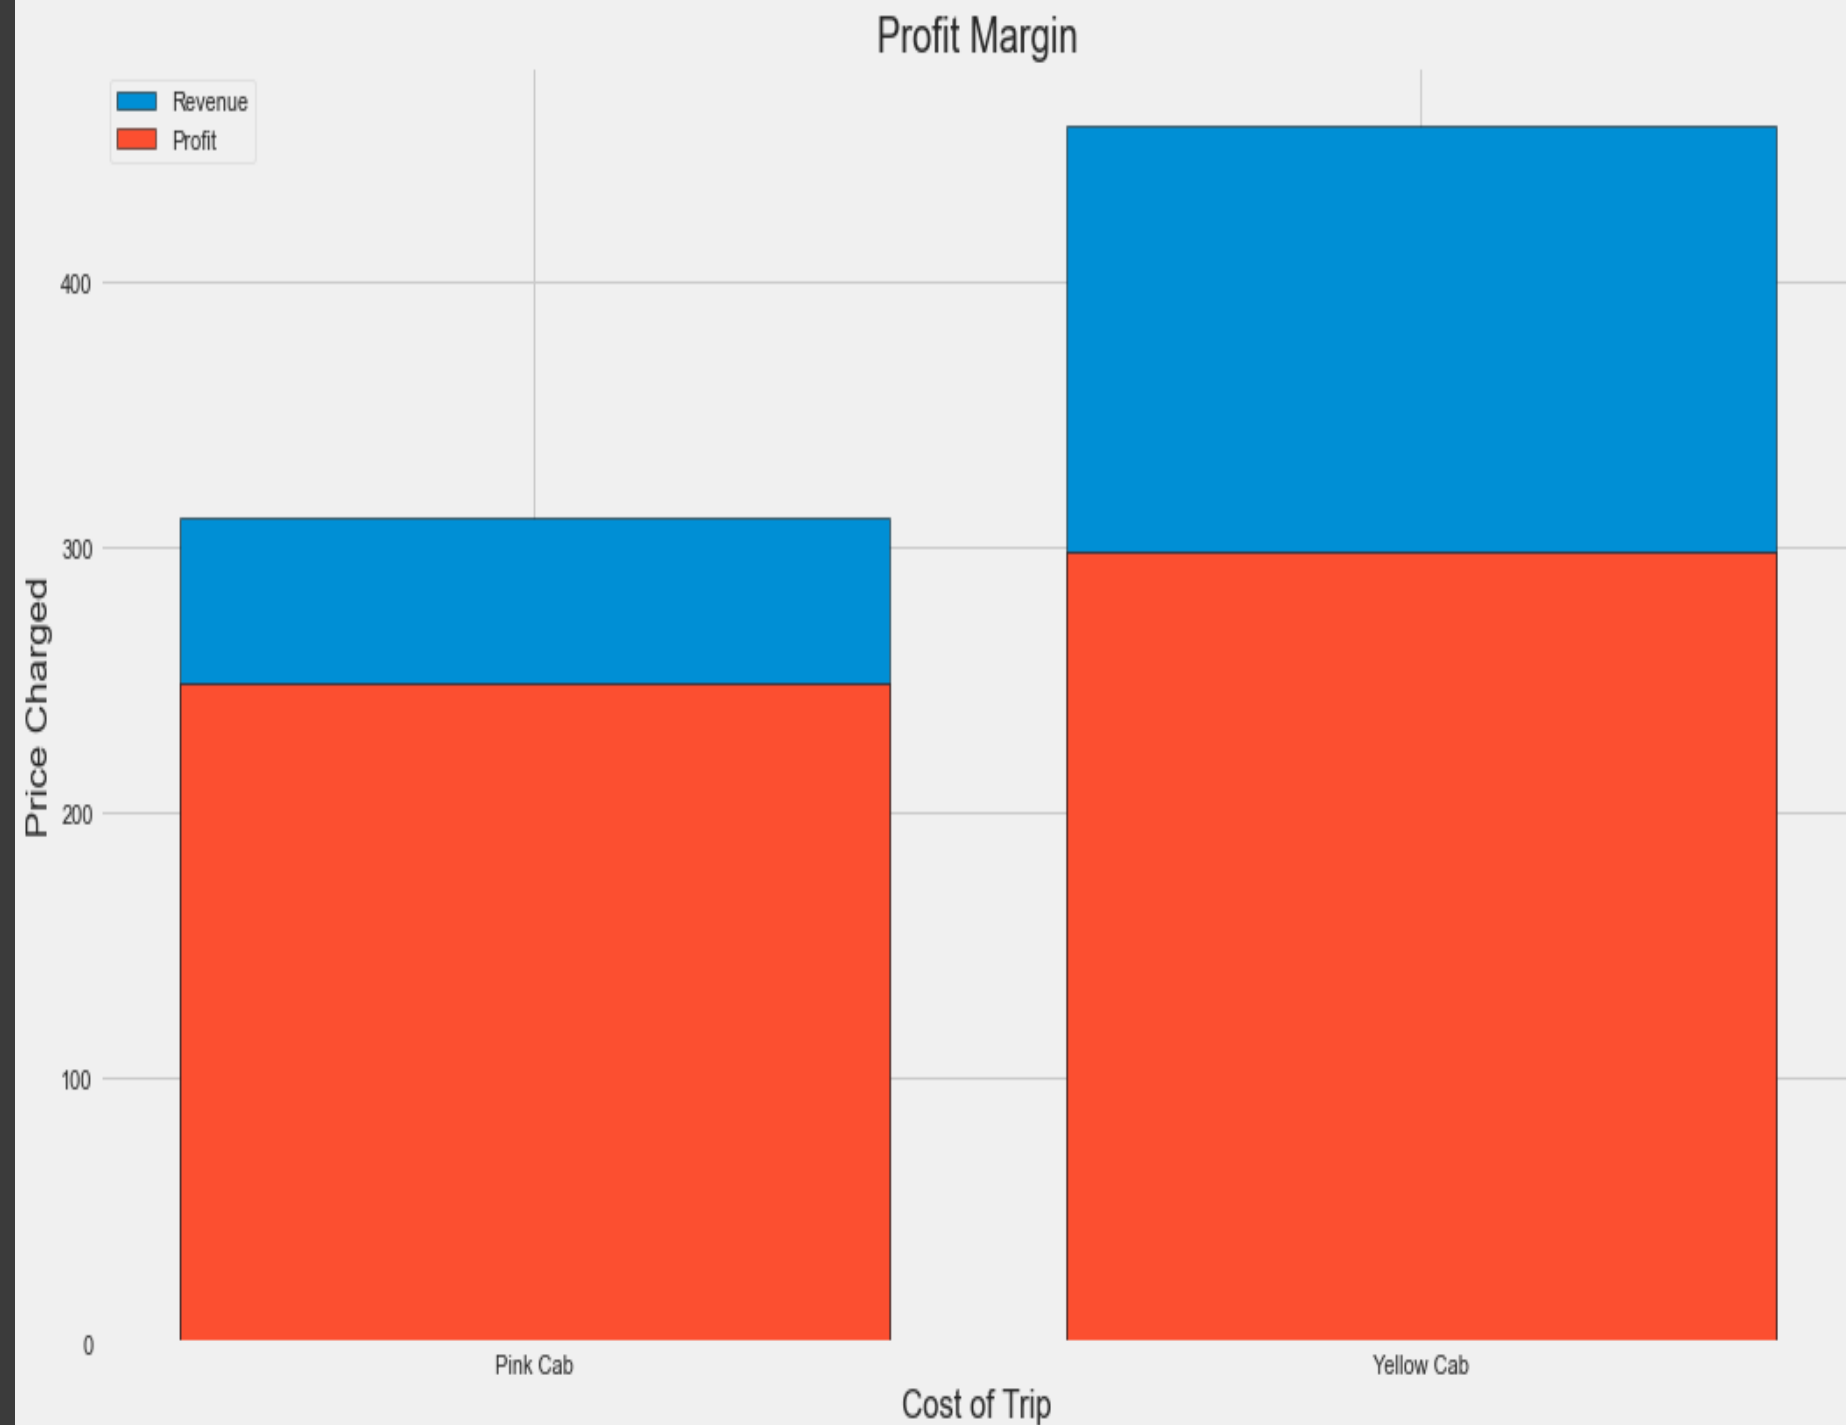

# EDA

## Profit Margin

### Insights:

- Yellow Cab profit margin is higher than that of Pink Cab.

# EDA

## Profit Margin Variation With Time

### Insights:

- Profit margin has been decreased with year.
- Profit margin varies with month.
- Pink cab has its highest profit margin at the end of the year.
- Yellow cab makes more profit in the first half of the year.

# EDA

## Relationship Between Price and Distance

### Insights:

- Price charged and distance travelled are linearly related.
- Yellow Cab price is higher than that of Pink Cab.

# EDA

## Distribution of Clients by City

### Insights:

- New York, Chicago, and Los Angeles have the highest percentage of cab users.

# HYPOTHESIS INVESTIGATION

# Hypothesis 1

Is there any different in profit margin by method of payment?

**H0:** There is no difference in profit margin generated by different payment methods.

**H0:** There is no difference in profit margin generated by different payment methods.

## Yellow Cab

P value is 0.2933060638298729

We accept the null hypothesis ( $H_0$ ) that there is no difference in the profits by payment method for Yellow Cab

## Pink Cab

P value is 0.7900465828793288

We accept null hypothesis ( $H_0$ ) that there is no difference in profits by payment method for Pink Cab

## CONCLUSION

There is no difference in profit margin by payment method for both cabs

# Hypothesis 2

Is there any different in profit margin by gender?

**H0:** There is no difference in profit margin by gender.

**H0:** There is no difference in profit margin by gender.

## Yellow Cab

P value is `6.060473042494144e-25`

We accept the alternative hypothesis (H1) that there is a difference in profits by gender for Yellow Cab

## Pink Cab

P value is `0.11515305900425798`

We accept null hypothesis (H0) that there is no difference in profits by gender for Pink Cab

## CONCLUSION

There is no difference in profit margin by gender for both cabs

# Hypothesis 3

Is there any different in profit margin by age?

## Yellow Cab

P value is 6.328485471267631e-05

We accept the alternative hypothesis (H1) that there is a difference in profits by age for Yellow Cab

## Pink Cab

P value is 0.4816748536155635

We accept the null hypothesis (H0) that there is no difference in profits by age for Pink Cab

## CONCLUSION

There is no difference in profit margin by age for Pink cabs.

It appears that Yellow cabs offer discount to senior citizens (60 or more years of age)

# RECOMMENDATIONS

Based on the facts that:

1. Yellow Cab has higher profit margin than Pink Cab
2. Yellow Cab has more clients than Pink Cab
3. Yellow Cab makes more transactions per annually

It would be better to invest in the Yellow Cab Company

# Thank You
